2

Commercial Market Overview

3

Commercial Building Make-up (U.S.)

Number of U.S. commercial buildings by principal building activity
thousand

Data source: U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey, December 2022

<https://www.eia.gov/energyexplained/use-of-energy/commercial-buildings.php>

Average floorspace by principal building activity
average square feet per building

Data source: U.S. Energy Information Administration, Commercial Buildings Energy Consumption Survey

<https://www.eia.gov/consumption/commercial/pba/overview.php>

© Energy Solutions Center Inc. – All Rights Reserved

4

~1/3 of Energy Use is for Heating

Major fuels consumption by end use in U.S. commercial buildings
share of total

eia Data source: U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey, December 2022
<https://www.eia.gov/energyexplained/use-of-energy/commercial-buildings.php>

5

High Performance Buildings

High Performance Buildings set out to:

- Improve the energy efficiency
- Reduce the energy consumption and improve occupant comfort, and cost-effectiveness
- Achieve goals by using energy-efficiency and renewable energy technologies, recycled and sustainable materials, and site sensitive design to minimize environmental impacts

© Energy Solutions Center Inc. – All Rights Reserved

6

Natural Gas Heating Technology in Commercial Buildings

- Provide environmental and energy savings benefits
- Offer financial savings for the building owner
- Improve building operations
- Reduce operating and maintenance costs

8

Impact on Energy Cost of Oversized Units Example

© Energy Solutions Center Inc. – All Rights Reserved

9

Annual Estimated Savings for Every \$100 of Fuel Costs by Increasing Your Heating Equipment Efficiency *

| Existing System AFUE | New / Upgraded System AFUE | | | | | | | | |
|----------------------|----------------------------|---------|---------|---------|---------|---------|---------|---------|---------|
| | 55% | 60% | 65% | 70% | 75% | 80% | 85% | 90% | 95% |
| 50% | \$9.09 | \$16.76 | \$23.07 | \$28.57 | \$33.33 | \$37.50 | \$41.24 | \$44.24 | \$47.36 |
| 55% | ---- | \$8.33 | \$15.38 | \$21.42 | \$26.66 | \$31.20 | \$35.29 | \$38.88 | \$42.10 |
| 60% | ---- | ---- | \$7.69 | \$14.28 | \$20.00 | \$25.00 | \$29.41 | \$33.33 | \$37.80 |
| 65% | ---- | ---- | ---- | \$7.14 | \$13.33 | \$18.75 | \$23.52 | \$27.77 | \$31.57 |
| 70% | ---- | ---- | ---- | ---- | \$6.66 | \$12.50 | \$17.64 | \$22.22 | \$26.32 |
| 75% | ---- | ---- | ---- | ---- | ---- | \$6.50 | \$11.76 | \$16.66 | \$21.10 |
| 80% | ---- | ---- | ---- | ---- | ---- | ---- | \$5.88 | \$11.11 | \$15.80 |
| 85% | ---- | ---- | ---- | ---- | ---- | ---- | ---- | \$5.55 | \$10.50 |
| 90% | ---- | ---- | ---- | ---- | ---- | ---- | ---- | ---- | \$5.30 |

*Assuming the same heat output

Example Replace your 70% Heating System with a 90% System and save \$22.22 for every \$100 / yr of energy for heating

10

Heating Technologies

11

Available HVAC Technologies

- Forced Warm Air Systems
- Make-Up Air Systems
- Unit Heaters
- PTACs
- Thru-The-Wall Units
- Heat Pumps
- Boilers
- Infrared Heaters
- Combo Heaters
- Thermostats & Reset Controllers

© Energy Solutions Center Inc. – All Rights Reserved

12

Forced Warm Air Systems

13

Forced Warm Air Furnaces

- Basic Physics of Warm Air Systems:
 - Warm air rises
 - Air must be moved by mechanical means
 - Air loses heat rapidly to the surroundings
 - Heats the air first ... then people

© Energy Solutions Center Inc. – All Rights Reserved

14

Furnaces Efficiency

Standard Warm Air Furnace

- Seasonal efficiency of at least 78 – 80 percent
- Most have naturally aspirated burners
- Newer furnaces have electric ignition systems
 - Can consume 3 to 5 percent less energy than a furnace with a conventional standing pilot

High Efficiency

- Common Features of High Efficiency Furnaces:
 - Conventional or Condensing design with heating efficiencies of 90% - 97%+
 - Capability to provide up to 100% outside air for “free cooling” on mild days
 - Quiet and efficient plenum fans
 - Modulating hot gas reheat
 - Indoor or outdoor installation

© Energy Solutions Center Inc. – All Rights Reserved

15

Rooftop Systems

- Natural gas rooftop units are the most commonly used HVAC systems for commercial buildings
- Usually purchased with gas heat and electric air conditioning in one unit
- Some designs employ modulating and/or condensing technology

© Energy Solutions Center Inc. – All Rights Reserved

16

Rooftop Systems

- Natural gas rooftop units provide comfort and efficiency, offering:
 - Fast morning warm-up and response times
 - Lower operating and maintenance costs
 - Longer life than electric heat pump units
 - Easily maintainable and replaceable systems

© Energy Solutions Center Inc. – All Rights Reserved

17

Rooftop Unit Efficiencies

Conventional Rooftops

- Often have efficiency ratings between 78 and 82 percent
- Heating capacities range from under 100,000 to over 500,000 BTU/hr.

High Efficiency Rooftops

- Designs employ modulating and condensing technology
- Efficiencies of 90% to 97% for condensing units
- Provide comfort and efficiency

© Energy Solutions Center Inc. – All Rights Reserved

18

Design Features

© Energy Solutions Center Inc. – All Rights Reserved

19

Make Up Air Systems (MUA)

20

Make Up Air Heater

© Energy Solutions Center Inc. – All Rights Reserved

21

Make Up Air Systems

- Cost effective way to provide fresh tempered air to “make up” for air leaving the building:
 - Restaurants and Commercial Kitchens
 - Office Buildings
 - Gymnasiums and Indoor Sports Facilities
 - Automobile Service and Repair Facilities
 - Wastewater and Sewage Treatment Facilities
 - Parking Garages

© Energy Solutions Center Inc. – All Rights Reserved

22

Make Up Air Systems – Two Options

- **Direct Fired Units**

- Gas is burned directly in the air stream being heated
- 100% of the available heat is delivered to the building

- **Indirect Fired Units**

- Gas is burned in a heat exchanger/furnace unit
- Typically 80% efficient due to heat exchanger efficiency and heat lost up the flue

© Energy Solutions Center Inc. – All Rights Reserved

23

Why Use Make Up Air

- Improved indoor air quality
- Improved equipment operation by supplying an adequate supply of combustion air
- Reduce cold air infiltration by heating outside air as it enters the building
- Reduce the infiltration of dust and dirt
- Improve occupant comfort and health by eliminating drafts
- Increase employee productivity and reduce absenteeism
- Improve overall building and systems efficiency and operation

© Energy Solutions Center Inc. – All Rights Reserved

24

Energy Recovery Ventilators (ERV)

- An air-to-air heat exchanger that recovers energy from both heat and humidity
- ERV reduces the peak heating & cooling loads
- ERV systems can provide annual energy savings by reducing the amount of HVAC energy needed
- Allows capital reduction due to HVAC equipment downsizing

© Energy Solutions Center Inc. – All Rights Reserved

25

Energy Recovery Ventilators (ERV)

© Energy Solutions Center Inc. – All Rights Reserved

26

Unit Heaters

27

Unit Heaters

- Typically suspended from the ceiling
 - Factories, warehouses, garages
 - Big box stores or warehouses
- Unit heaters provide an excellent solution for
 - Doorway heating (entry)
 - Freeze protection (loading docks)
 - Space heating (retail or warehouse)
 - Summer time air circulation
- Typically 78-80% efficiency

© Energy Solutions Center Inc. – All Rights Reserved

28

High Efficiency Unit Heaters

- Units Incorporate
 - Tubular heat exchanger
 - Power vented exhaust
 - Integrated Direct Spark Control
- Easy to install and control
- System design is necessary to provide maximum heating results
- Up to 97% Efficiency
- Outputs from 51,150 to 288,300 BTU/Hour

© Energy Solutions Center Inc. – All Rights Reserved

29

<https://www.modinehvac.com/products/unit-heaters/commercial-gas-fired-heaters/effinity-with-building-management-system-integration-ptc-btc/>

Unit Heater Example

- Mounted in Elevated Positions from which Heated Air is Directed Downward
- For Buildings with Low to Moderate Ceiling Heights

Approx. 30 Ft. Maximum Ceiling Height

© Energy Solutions Center Inc. – All Rights Reserved

30

Benefits of Unit Heaters

- Relatively Light Weight / Roof Load per Btu Output
- Only heat occupied areas as necessary (Zone Control)
- Doesn't Consume Productive Floor Space
- Multiple Unit Redundancy
- Air Circulation by Fans in Summer Mode
- Quick Response to Night Setback Temperatures
- Re-Cycles Warm Air Stratifying at the Ceiling

© Energy Solutions Center Inc. – All Rights Reserved

31

Unit Heater Considerations

- Piping to systems
- Roof penetrations for exhaust
- Condensate removal for H.E. models
- Clearances (Combustibles, Accessibility, Free flow of air)

© Energy Solutions Center Inc. – All Rights Reserved

32

Unit Heater Types

Blower Unit Heater

Ductwork & Nozzles Acceptable
Quieter Than Propeller Units
Higher Cost Than Propeller Units
Power Vented

Propeller Unit Heater

Deflector Blades & Hoods Acceptable
Ductwork & Nozzles Not Acceptable
Lower Cost Than Blower Units

© Energy Solutions Center Inc. – All Rights Reserved

33

PTACs

Packaged Terminal Air Conditioner

34

PTACs

- Single package containing all the components of an air-cooled air conditioner, furnace and air-handling system
- Used where individual zones have an outside wall and are conditioned separately with individual occupant control
- Well suited to hotels, motels, nursing homes, schools and apartments
- Units available with various heating options
- Natural gas as well as hydronic options using gas fired boilers
- Typical Efficiency – 80%

© Energy Solutions Center Inc. – All Rights Reserved

35

Issues with PTACs

- Pro's:
 - Higher efficiency units now available
 - Replacement units available for older systems
 - Only heat/cool occupied areas as necessary
- Con's:
 - Noise
 - Piping to systems
 - Multiple units = more maintenance

© Energy Solutions Center Inc. – All Rights Reserved

36

Thru the Wall Furnaces

37

Thru-The-Wall Units

- Thru-The-Wall Units combine heating and cooling in one compact easy-to-install unit
- For use in:
 - Apartments
 - Condominiums
 - Other multiple occupancy buildings
- Efficiency – 80%
- Each space has individual comfort controls providing tenants complete control over their comfort needs

© Energy Solutions Center Inc. – All Rights Reserved

38

Thru-The-Wall Units

- Available in gas heating/electric cooling, heat pump and electric heating/cooling
- Easily installed with venting through side of building
- Great for multi-family

© Energy Solutions Center Inc. – All Rights Reserved

39

Issues with Thru the Wall Units

- Pro's:
 - High efficiency units available
 - Replacement units available for older systems
 - Occupants heat/cool space as necessary
- Con's:
 - Gas piping and metering to systems
 - Individual units = more maintenance

© Energy Solutions Center Inc. – All Rights Reserved

40

What is a “Heat Pump”

- Device that transfers thermal energy from a heat source to a heat sink
- Move thermal energy in a direction which is opposite to the direction of spontaneous heat flow
- A heat pump uses energy to accomplish the desired transfer of thermal energy from heat source to heat sink and vice versa based on winter or summer operation

How it Works in Heating Mode

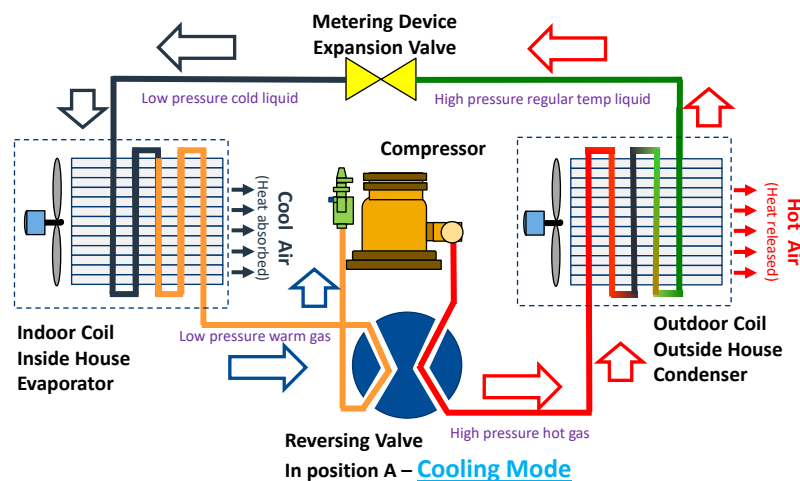

Vapor Compression for Electric and Gas Engine Heat Pumps

- Refrigerant flow is reversed via a valve in the system
- Reversing valve rotates 90°
- Changes the direction of the flow of the refrigerant
- Flow is in the opposite direction – the reverse of the cooling cycle

© Energy Solutions Center Inc. – All Rights Reserved

Air Source System in Cooling Mode (Typical Electric or Engine Driven Air Conditioning)

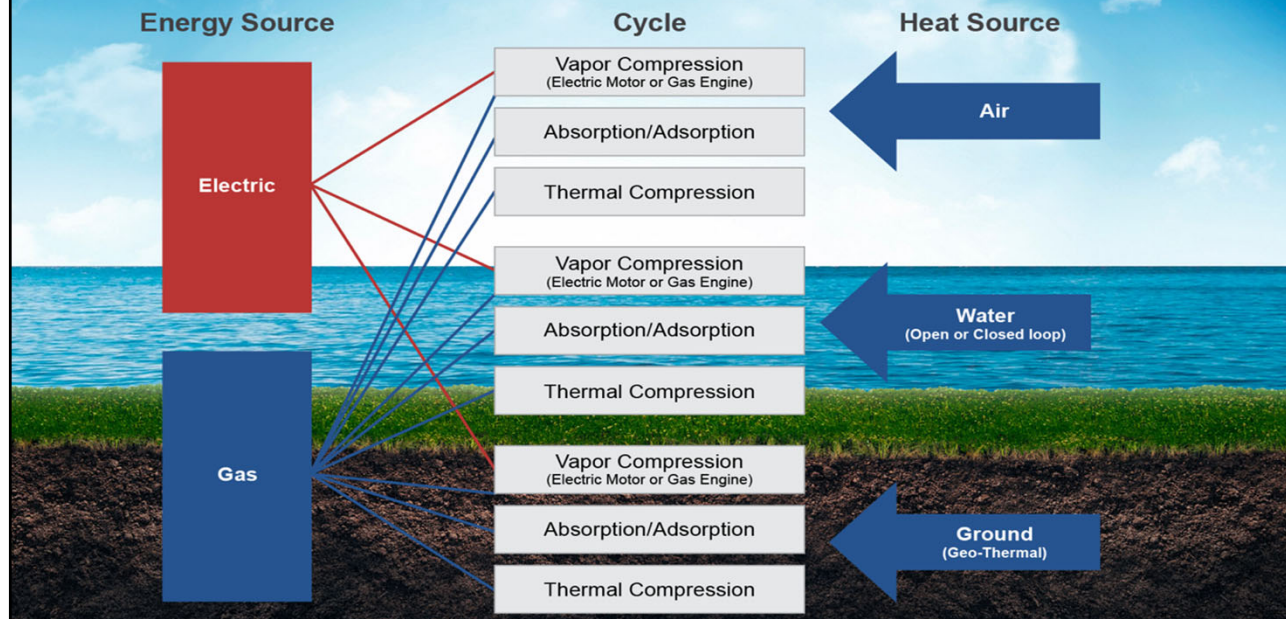

© Energy Solutions Center Inc. – All Rights Reserved

Air Source Heating Mode

© Energy Solutions Center Inc. – All Rights Reserved

Types of Heat Pumps

Air Source

- Takes heat from air in the winter and uses it to heat the space
- Takes heat away from the space in the summer to cool the indoor air
- Outside unit could be electric, gas engine or absorber

This Photo by Unknown Author is licensed under CC BY-NC

Water Source Heat Pumps

- Closed Loop
 - Just like ground source, antifreeze solution is in a closed circuit and completely isolated from the water source
 - Water from a close by lake or pond is used as the heat source/sink
- Open Loop
 - Lake or pond water is circulated directly through the loop

© Energy Solutions Center Inc. – All Rights Reserved

This Photo by Unknown Authors are licensed under CC BY-SA

Ground Source Heat Pumps

- Soil temperature is almost constant year round
 - Warmer than air in the winter
 - Cooler than air in the summer
- Types of Ground Source Heat Pumps
 - Electric heat pumps
 - Gas engine heat pumps
 - Absorption heat pumps

50

GHP: Engine Driven (Heating mode)

GHP: Absorption(Heating mode)

GHP vs EHP Heating Capacity at Various Outdoor Temperatures

Gas heat pumps do a much better job heating at lower temperatures than electric heat pumps.

Boilers for Building Heat

57

Typical Boiler Schematic

58

Types of Boilers (see boiler details in Unit 2)

Sectional

Fin Tube

Fire Tube

Coiled Tube

Water Tube

<https://www.lochinvar.com>

<https://www.cleaverbrooks.com/Catalog/boilers/firetube/cbex>

<https://www.cleaverbrooks.com/Catalog/boilers/package-water-tube-boilers/fix>

© Energy Solutions Center Inc. – All Rights Reserved

59

Hydronic Floor Heating

- Boilers can provide hot water for Radiant Floor Heating
 - “In floor” radiant heating uses a hot fluid that runs through tubing (often PEX plastic)
 - Hot water from boiler circulates through system
 - Heat radiates to space
 - No air movement
 - Quiet system

© Energy Solutions Center Inc. – All Rights Reserved

60

Steam & Hot Water Heating Systems

- Boilers provide heat to heat exchangers that transfer heat to space
- Radiator – Radiates heat to space through natural convection
- Fan Coil System – Steam or hot water passes through coil – with fan blowing air across the coils

In Ceiling Fan Coil System

Baseboard
Style

61

Hydronic Heating System Components

- In Ceiling Fan Coil Systems
- Baseboard Styles
- Radiators

© Energy Solutions Center Inc. – All Rights Reserved

62

Boiler Systems

- Pro's
 - Soft Heat – no drafts from radiator systems
 - Long life expectancy
- Con's
 - Water treatment
 - System maintenance
 - Floor space requirements
 - Operational vulnerability – one boiler

© Energy Solutions Center Inc. – All Rights Reserved

63

Gas Infrared Systems

64

What is Infrared Heat?

- **Infrared (Radiant) Heat** is an energy wave generated by a hot source through the vibration of molecules
- Energy is absorbed directly by people and objects
- Does not depend on heating of the air to heat those people and objects
- The Sun – energy is projected over 90 million miles through space to earth at the speed of light

© Energy Solutions Center Inc. – All Rights Reserved

65

Warm Air vs. Infrared Heating Systems

Forced Warm Air

Infrared Heating

© Energy Solutions Center Inc. – All Rights Reserved

66

Infrared Natural Gas Heat Systems

- Types of systems
 - High intensity units
 - Low intensity tubular units
- Generate radiant energy that is converted into heat when absorbed by objects in its path
- 20-50% fuel savings over conventional forced air units

© Energy Solutions Center Inc. – All Rights Reserved

67

High Intensity Infrared Heaters

- Shorter wavelength – visible energy
- Higher temperature range
- Spot heat potential
- Indoor & outdoor applications
- Transmits heat over greater distances – 12-40 feet (3.6-12.2 meters)

~ 1600 – 1800°F
(~ 871.1 – 982.2°)

© Energy Solutions Center Inc. – All Rights Reserved

68

Low Intensity (Tube) Heaters

- Tube heaters with closed combustion burners – nonvisible (longer wavelength)
- Vented or non-vented versions
- Vacuum or pressure tube styles
- Install 10-20 feet (3-6 meters) from objects to be heated

© Energy Solutions Center Inc. – All Rights Reserved

69

Typical “IR” Applications

- | | |
|------------------------|-------------------|
| ▪ Loading Docks | ▪ Truck Terminals |
| ▪ Machine Shops | ▪ Warehouses |
| ▪ Aircraft Hangars | ▪ Factories |
| ▪ Repair Garages | ▪ Stadiums |
| ▪ Implement Dealers | ▪ Steel Mills |
| ▪ Car / Truck Dealers | ▪ Gymnasiums |
| ▪ Maintenance Areas | ▪ Foundries |
| ▪ Indoor Sports Arenas | ▪ Firehouses |
| ▪ Hockey, Tennis, etc. | ▪ Grandstands |

© Energy Solutions Center Inc. – All Rights Reserved

70

IR Installations

© Energy Solutions Center Inc. – All Rights Reserved

71

Combo Heating Systems

72

Types of Combo Systems

- Water heater that also provides space heat
- Boiler for space heating that also makes hot water

“A highly efficient combination system can reduce water heating and space heating energy use by 15 percent or more compared to a standard water heater and space heating installation”

<http://www.builditgreen.org/attachments/wysiwyg/22/Combo-Systems.pdf>

© Energy Solutions Center Inc. – All Rights Reserved

73

Water Heater Combo Systems

- Typically used in smaller spaces such as apartments
- System design and component selection is critical
- High efficiency models are available that allow venting of the water heaters through a wall instead of a chimney
- Competitive with other conventional options such as heat pumps and electric water heaters
- Can use tank or tankless water heater units

© Energy Solutions Center Inc. – All Rights Reserved

74

Boiler Combo Systems

- Boiler has a small water coil typically above the combustion chamber. As the boiler runs hot water is produced.
 - Hot water from the boiler used to provide space heat through hydronic / radiator system.
 - Hot water also sent to indirect storage tank, with internal coils to transfer heat from the boiler water to the domestic hot water.

Source: GAMA

© Energy Solutions Center Inc. – All Rights Reserved

75

Thermostats and Reset Controls

76

Programmable Thermostats

- Choice of battery-powered or hardwired with battery back-up
- Meets ENERGY STAR® specifications
- For small commercial installations – thermostats look and operate much like residential thermostats
- Universal – choice of 7 day, 5/1/1 or 5/2 day programmable or non-programmable versions
- Programmable fan
- Optional remote sensing of indoor/outdoor temps and humidity
- Automatic daylight savings option

© Energy Solutions Center Inc. – All Rights Reserved

77

Medium to Large Commercial Controls

- Computerized Control Systems
 - Programmable Controllers
 - Sensors
 - Wired & Wireless Options
 - Monitoring, Reporting and Analysis Programs
 - Temperature, Humidity and CO2 monitoring & control

© Energy Solutions Center Inc. – All Rights Reserved

78

Commercial Controls Can Offer

Floorplan Views

System Monitoring Capability

Operations Analysis

© Energy Solutions Center Inc. – All Rights Reserved

79

Reset Controllers

- Have two temperature sensors – one outside the building & one in the boiler water
- As outdoor temperature fluctuates, the controller adjusts the water temperature setting to the lowest setting needed to meet the heating demand based on programming
- Limits exist in the controls to keep the boiler from operating outside of its safe performance range
- Save 1% of energy consumption for every 4°F (-15.5°C) of reduction in boiler water temperature

© Energy Solutions Center Inc. – All Rights Reserved

80

Associations and Resources

Numerous Trade Associations and web resources are available to assist and provide you additional information and resources
